-Identity Proofing to enable e-prescribing (one-time fee)

Capability and Certification Criteria	Description of capability	Limitations (Contractual / Business Practices)	Limitations (Technical / Practical)
<p>Electronic Prescribing of Medications Certification Criteria: § 170.315(a)(1) Computerized provider order entry (CPOE) of Medications</p>	<p>Electronic Prescribing: Allows licensed providers, that have prescribing privileges, to send prescriptions electronically to pharmacies. Sending prescriptions via fax or printing is included in the base price of the product. (NOTE: This does not include the electronic prescribing of controlled substances.) eMDs uses Surescripts for transmission of electronic prescriptions and ID Proofing.</p>	<p>ID Proofing is required onetime only. This is a requirement of Surescripts to confirm the identity of the provider.</p>	<p>Requires internet connection. Prescriptions can only be sent electronically to pharmacies that have enabled this capability. This is outside the control of eMDs or any other electronic health record. Related to ID Proofing, providers will need to assure that there is not a block on their credit history. This could represent a delay in obtaining the necessary validation for ID Proofing.</p>
<p>Laboratory Interface Certification Criteria: § 170.315(a)(2) Computerized provider order entry (CPOE) of Laboratory</p>	<p>HL7 Results Interface-Lab Users will have the ability to set up an interface connection that allows for the import (receiving) of results. This includes, but is not necessarily limited to, laboratory results. Currently eMDs offers connections with approximately 800 different vendors for e-MDs Solution Series. These include a variety of different results including laboratory, radiology and pathology, for example. Although there are not as many connections currently available for eMDs Cloud Solutions, this capability is available and expanding quickly. eMDs has the ability to connect with any vendor that follows the HL7 standards specified in certification. For a full list of laboratories that are currently supported for each product line, contact our sales team at sales@e-mds.com.</p>	<p>Contract with the laboratory or other facility supplying the results will be required. For Solution Series Only: This functionality requires the e-MDs Interface Engine.</p>	<p>Requires internet connection. Any entity wishing to connect must comply with the standards specified by ONC which is HL7 2.5.1. In order to meet the ONC requirements for certification eMDs cannot not deviate from this standard.</p>
<p>Radiology (X-ray) Interface Certification Criteria: §170.315(a)(3) Computerized provider order entry (CPOE) of Radiology/Imaging</p>	<p>HL7 Results Interface-Radiology (X-ray). Users will have the ability to set up an interface (connection) with a radiology facility thereby allowing the import of their radiology results as a text based report (this does not include images). Currently e-MDs offers connections with approximately 800 different vendors for eMDs Solution Series. These include a variety of different results including laboratory, radiology and pathology, for example. Although there are not as many connections currently available for e-MDs Cloud Solutions, this capability is available and expanding quickly. eMDs has the ability to connect with any vendor that follows the HL7 standards specified in certification. For a full list of radiology facilities that are currently supported for each product line, contact our sales team at sales@e-mds.com.</p>	<p>Contract with the radiology entity will be required. This functionality requires the eMDs Interface Engine.</p>	<p>Requires internet connection. Any entity wishing to connect must comply with the standards specified by ONC which is HL7 2.5.1. In order to meet the ONC requirements for certification eMDs cannot not deviate from this standard. Radiology results are limited to text based reports. Images are not included.</p>
